

## Purchasing @dventure® PC Plus

Purchasing @dventure PC Plus is designed for suppliers who accept both consumer and commercial cards and authorize transactions through their PCs. It enables suppliers to provide line item detail such as purchase order numbers, part numbers, item descriptions, unit prices, item quantities, or American Express® charge descriptions to their corporate customers for commercial card transactions.

The line-item detail is sent through the MasterCard® and Visa® issuing banks and then on to the corporate customers. Charge descriptors are entered as order comments and sent to American Express during the settlement process. The supplier is reimbursed in a timely manner (usually two-three days), qualifies for lowest possible interchange rates, and provides value-added information to customers.

Operating in the Windows® environment, Purchasing @dventure PC Plus enables suppliers to easily navigate through the order entry and payment process. User-friendly point-and-click functionality saves time and reduces keying errors. Transaction reports contain detailed data providing a concise review of transaction activity. Invoices and packing slips can be created from any transaction order on file.

Global Payments makes life a little easier for millions of businesses and consumers every day. As one of the largest payment processors in the world, Global Payments processes billions of both business and consumer transactions annually through our electronic information network.

### Features

- Authorization and settlement of all major credit (consumer and commercial) transactions through a single software solution
- Supports all levels of commercial card enhanced data, capturing both Level II and Level III enhanced data for MasterCard and Visa and facilitating the reporting of unique commercial card data such as sales tax, purchase order numbers, and line-item detail
- Captures enhanced data for American Express Corporate Purchasing Cards — including sales tax, supplier and card member reference numbers, and charge descriptors
- Provides optional secure IP VPN Internet connectivity
- Features Plug and Play modem support for dial-up connection
- Offers LAN client/server support for workstation sharing

- Includes card swipe and receipt printing capability for walk-in customers
- Supports suppliers with multi-merchant account needs, either to accommodate both retail and MOTO requirements or to differentiate between multiple accounts in the same office or location
- Facilitates simplified data entry through use of database tables
- Allows the importing and exporting of transactions with line-item detail, customer lists, and product inventory files
- Processes large dollar transactions — up to 10 million dollars per transaction
- Supports e-commerce indicator for Internet-initiated purchases
- Provides unique transaction reporting with multiple sort options for summary or detail review of activity
- Incorporates Windows user-friendly interface with point-and-click functionality
- Provides comprehensive online product documentation as well as complete 24-hour, 365 day-a-year customer support by Global Payments' trained help desk specialists

### Benefits

- Qualifies merchant for the lowest processing costs in terms of interchange rates by meeting card association requirements for collecting enhanced data
- Reduces bankcard costs by supporting compliance requirements for best interchange including CVV2, CVC2, American Express CID and Discover CID
- Improves merchant cashflow by reducing payment receipt time from 30-60 days to two-three business days
- Reduces collection expenses through electronic authorization and guaranteed payment processing

## Benefits (continued)

- Saves valuable time and money with IP VPN connectivity option by providing suppliers with immediate connections and the quickest response times and by utilizing existing Internet connection
- Strengthens ties to existing customers and expands customer base by offering favored payment options
- Improves employee productivity, reduces costs, and lowers overhead through the elimination of invoicing, as well as check posting, reconciliation, and handling

## Minimum system requirements

### Dial-up connection

- Pentium Class processor
- Windows 98 or higher
- 128 MB RAM
- 20 MB free disk space
- SVGA (800 x 600) color monitor

### Additional requirements for IP VPN or LAN connection

- Broadband connection (DSL, T1 or cable modem)
- Windows 2000 or XP
